Seeking assignments in IT/Telecom in an organization of repute

Cisco ID No.: CSC013384660

Experience Summary

- 13+ years of experience in Network Engineering.
- Hands-on experience in BGP, OSPF, MPLA and Static routing
- Hands-on experience in Cisco and vptela SDWAN
- Hands-on experience in firewalls ASA (5505, 5525), Cisco Firepower (NGFW), Fortigate (140D, 300D and 600D) and Checkpoint R80.40 Router ASR 1000 series and ISR 4000 series
- Extensive network support, troubleshooting, Traffic load balancing, monitoring experience with high analytical skills.
- Implementing Lease line/ RF links for Base station and Customer location
- Troubleshooting of WAN link of VPN, MPLS, NPLS, SILL, PILL, ILL
- Knowledge of ECI and Tejus MUX installation and cross connections.

Note: Pursuing Python Software course (Prioritizing for Network Atomization) and also CISSP (Certified Information Systems Security Professional)

Technical Proficiency:

- **Networking:** Routing, Switching, SD-WAN, Zscaler, SSL/IPsec, VPN, MPLC, Point to Point, PILL, NPLC
- **Hardware:** Cisco [Switches (2900, 3500, 3700, 4500, 6500), Routers (2600, 7200 series)], Palo Alto fire wall, Cisco ASA 5505 Plus firepower, Check Point Firewall

Professional Experience:

- Currently working with IPDigital Pvt Ltd as Network Engineer from Dec 23 to till date.
- Previously with TOYOTA TSUSHO SYSTEMS as Network Engineer L3 from Sept 22 to Nov 23 (1Yrs, 2 Moths)
- Worked as Network Engineer with Sify Technologies Ltd as L2 from Jan 2020 – Feb 22 (2Yrs, 1Moth)
- Worked as Team Lead / L2 Network Engineer with CMS IT Services Pvt Ltd from Aug 17- to Dec 2019 (2Yrs, 4 Moths).
- Worked as IWAN Deployment Lead with Bharti Airtel Ltd from Feb 16 – July 17 (1Yrs, 4 Moths).
- Worked as Delivery Telecom Engineer with Sify Technologies Ltd as from Sept 14 - Feb 16 (1Yrs, 4 Moths).
- Worked as Desk Engineer Tata Communications Ltd from Nov 09 - Sept 14 (5 Yrs.).

Organizational Experience

IPDigital Pvt Ltd

Network Engineer

Dec 2023 to till date

Present Roles and Responsibilities: (Colgate Project)

- **Switch Replacement & Extension:** For every 5 Yrs. the switch will be replaced henceforth the new switch is configured with old configuration during the down time the switch replacement activity. As per local IT requirement depending on the Location and required ports the Proposal will be provided and if proposal is accepted, we will configure the new switch and provide the port mapping to WCS Engineer
- **Switch IOS upgradation:** We will check the Latest version provided by the Cisco Team every year and The Plants are prioritized later the Business switch is done for the IOS upgradation.
- **New L2/ L3 Vlan Creation:** As per user required Application the L2 Vlan will be configured and if the L3 routing is required L3 Vlan the IP subnet is checked with the WAN team and L3 Vlan is created.

- **Port Channel Creation:** As per Colgate standards all Switch should be with Two uplinks and should be with Port channelled. So as a part of Network topology correcting the Switch with single uplink are identified and the port channel is created by coordinating with the Local IT for downtime and Switch port requirement.
- **Redesigning the LAN topology:** The LAN topology must be as per Colgate standards according to the Three tier, two tier and Single tier architecture depending on the Plant or the office Site size. But during the LAN extension and increase in requirement of the switch port the site goes out of Standards which need to be identified and redesigned the LAN topology and maintained according to standard.
- **DNAC Monitoring & Inventory Maintenance:** The Monitoring activity is performant manually which included all type of alerts, The new switches into the Cisco DNAC inventory, The IOS upgradation and/or during the multiple Switches with the same configuration the activity is performed by pushing the configuration template or the IOS to the switch. In DNAC maintenance the IOS upgradation and before DNAC version update analyzing of Arau of the DNAC.
- **ISE Authentication of the Switch and Users:** In Colgate ISE is used for authentication of Network Switch and authorized users the Switch
- **Forescout Team:** The Security alert and notify if there are any vulnerabilities in the network. We need to work on the mitigation of the vulnerabilities and resolve the issue.
- **Coordination of Stakeholders:** Under stakeholders we have Site Managers, Local IT Engineers, Cisco TAC team, Security team and WAN team depending on the requirement and issue we need to coordinate with the concerned person and team.

TOYOTATSUSHO SYSTEMS

Network Engineer L3

Sept 2022 to Nov 2023

Roles and Responsibilities:

- Troubleshoot network related issues within SLA and handle escalations from L1 team & also monitor and manage uptime SLA of ISP.
- Ensure optimum performance of key components such as Routers, Firewalls, Switches, WAPs, ISE, IPS, Zscaler & manage SSL VPN user access.
- Monitor the network performance & submit periodic network health check report, Ensure up to date network configuration backup database, SOPs, IP inventory & documented network architecture
- Perform periodic maintenance & sanitize firewall policies & rule sets as may be required, identify issues & points of failure in the network & assisting managers for capacity planning
- Security Risk Identification and mitigation within network infrastructure, maintain all relevant documentation pertaining to network infrastructure.
- Support Infrastructure for new or existing projects through requirements gathering, project management, design & implementation of appropriate technologies.
- Actively participate in preparing the annual technology plan to give inputs on latest technologies which may help in improving service & reduce costs.
- Introduce new technology solutions or fine-tune existing solutions in data and voice network environment that would help to enhance operational efficiencies.
- Reduce overall complexity of the infrastructure along with cost reduction in annual OPEX costs & monitor network resources and prepare monthly MIS report.
- Perform failover testing of the various critical network resources & submit the testing report & reduce planned downtimes.
- Maintaining the Infrastructure as per the ISO standard & active monitoring the deviation. Eliminate Single point of failure by re-designing, creating redundancies, license management etc.
- Actively participate in VAPT activity and timely remediation of vulnerabilities

Roles and Responsibilities: (ASG Network L2 Engineer)

- Managing the Escalations of L1 & L2 Engineers of daily activities.
- Maintaining the customers infra in operation by resolving the network issue.
- Configure new customer link switches, remote configuration and maintenance load balance and of BTS Cisco.
- Configuring new Links on SDWAN with individual grouping of companies.
- Proficient of programming automatic configuration backup on regular intervals using Python and updating the same to the respective customers.

Roles and Responsibilities in Syndicate (Canara) Bank: (L2 Network –Senior Engineer)

- Manage customer LAN /WAN infrastructure by regularly generating and assessing reports / logs for errors, warnings, vulnerabilities etc.
- Implementing and decommissioning the new Bank branches configuring the new WAN Link.
- Blocking the spacious IP on the Internet facing WAN Switch, also Finding Bugs on the switches located mainly IN DC and DR.
- Doing BGP routes manipulating BGP Prefix's for better and effective routing in Both DC and DR.
- Migrating all Syndicate Bank Branches to the Canara bank by LAN IP migration, LAN Advertising and LAN Routing.

Roles and Responsibilities: (L2 Network -Team Lead)

- Maintaining the customers infra in operation by resolving the network issue.
 - Manage customer LAN / WAN infrastructure by regularly generating and assessing reports / logs for errors, warnings, vulnerabilities etc.
 - Support escalations from Customer, Account teams and L1 Engineers to resolve issues or work on solution to minimize the impact based on priority.
- Performing the change request of customer in network infra such as establishing new branch by configuring the Branch Switch, routers and also Firewall.
- Providing the access to the users in Head office and as well as branch office for DC located servers in ASA context firewall and Checkpoint firewall.
- Validating and performing changes on IMSVA (InterScan Messaging Security Virtual Appliance) in the network and resolving any security vulnerability issues.
- Interact and provide feedback to Account team on any new network procurements
- Work with transition team to analyze device reports for configuration, status and accept KT (knowledge transfer) for devices taken into BAU.
- Manage resources (Internal support personnel, vendor availability, Parts availability etc.) to ensure Minimum 99% uptime (SLA) across the network infrastructure for the accounts managed.
 - Manage team of 13 members in BAU working in Network operations and Monitoring team – Shift Allocation, balancing resource based on skill level, planning for resource availability with Manager Etc.,

Roles and Responsibilities: (Deployment Lead)

- Ensure the Planning is made with a Success rate of Minimum 95% and coordinating it with ProjectManagers. Maintaining Down calls SLA.
- Manage and Ensure Materials (RF Device SFP and MUX cards) for New deployment and Down Calls with Tracking.
- Maintain and track the utilization and allocation of Ericsson RTN and TN port details.
- Getting updates from Partner teams and co-ordinate with MIS for daily and monthly deployment targets.
- Maintain and track the KLM details on E-Gate devices.
- Providing timely update of deployment and getting CE RA Provisioned according to BH RA.

Roles and Responsibilities: (FIO-GIO)

- Delivery of Leased Lines such as E1, Ethernet DS3 in both SDH and PDH formats of Voice and Data
- Configuring Routers, Switches and Modem/Convertors at Customer Location and Base stations.
- Site Survey at customer and Base station for fiber optical link & later Installing and Testing of New Data Links and handing it over to the End Customer.
- Maintaining the SLA of Installation and Delivery of the Circuits to End Customer, troubleshooting the links and resolving the issues in minimal time to maintain the MTTR.

Roles and Responsibilities:

- Maintenance of Leased Lines, Internet Links and Data Links in Active State.
- Installation and Testing of New Data Links and handing it over to the End Customer.
- Testing and Maintaining the Mux and Routers in Active State, Tracking, Maintaining and updating the status of the Data Links.
- Configuring Routers and Switches at Customer Location such as 2600 and 2960 and at Cell Sites / BTS 4500 Switches.
- Troubleshooting the links and resolving the issues in minimal time to maintain the MTTR, Maintaining the SLA of Installation and Delivery of the Circuits to End Customer.

Academic Credentials

Qualification	University/Institute
Bachelor of Engineering in E&C	VTU/CMRT Institute, Bangalore
Diploma in E&C	MNT Institute, Bangalore
S.S.L.C	Lourdes High School, Bangalore

Personal Dossier

Name	Raghavendra. P
DOB	04 th Aug 1982
Father Name	R Prakash
Nationality	Indian
Email ID	prakashraghavendra999@gmail.com
Phone Number	8496039988

All the above furnished information is right and accurate to the best of my knowledge.
