

VEERESH BHANTANUR

Network Engineer | CCNA & CCNP Certified

+91 9380981729 • vireshbhantanur@gmail.com • Bengaluru, India • linkedin.com/in/veeresh-bhantanur-84830a35b

PROFESSIONAL SUMMARY

Motivated and detail-oriented Network Engineer Fresher holding both CCNA (200-301) and CCNP Enterprise certifications with extensive hands-on lab experience in enterprise network design, configuration, and troubleshooting. Proficient in routing protocols (OSPF, EIGRP, BGP, RIP), Layer 2 switching technologies (VLAN, STP, EtherChannel), WAN/LAN architecture, network security (ACL, NAT/PAT, VPN), and network services (DHCP, DNS, SNMP). Skilled in industry-standard simulation platforms including GNS3, EVE-NG, and Cisco Packet Tracer. Adept at applying the OSI and TCP/IP models to diagnose and resolve network faults. Eager to contribute to a dynamic IT team in a Network Engineer, NOC Analyst, or L1/L2 Network Support role.

TECHNICAL SKILLS

Routing & Switching

Routing Protocols: OSPF (Single & Multi-Area), EIGRP, BGP (iBGP & eBGP), RIP v1/v2, Static & Default Routing

Route Management: Route Redistribution, Administrative Distance, Path Selection, Floating Static Routes

Switching: VLAN (Access/Trunk), VTP (Server/Client/Transparent), IEEE 802.1Q Trunking, Inter-VLAN Routing

Layer 2 Features: STP, RSTP, PVST+, Rapid-PVST+, EtherChannel (LACP/PagP), Port Security, BPDU Guard

Network Security

Access Control: Standard ACL, Extended ACL, Named ACL, Time-Based ACL

Address Translation: Static NAT, Dynamic NAT, PAT (Port Address Translation), NAT Overload

VPN & Firewall: Site-to-Site VPN, IPsec Fundamentals, Firewall Concepts (Packet Filtering, Stateful Inspection)

Network Services & Protocols

Core Services: DHCP, DNS, ARP, NTP, SNMP, Syslog, CDP, LLDP

Transport & Internet: TCP, UDP, IPv4, IPv6, ICMP, HTTP/HTTPS, FTP, Telnet, SSH

IP Addressing: VLSM, CIDR, Subnetting, Supernetting, Private/Public IP, IP Classes

Tools & Platforms

Simulation Tools: GNS3, EVE-NG, Cisco Packet Tracer

Network Utilities: Wireshark (Packet Analysis), PuTTY, SecureCRT, Ping, Traceroute, NSlookup

Cisco Hardware: Cisco IOS (Routers & Switches), Catalyst Series, ISR Series

NOC & Monitoring: Network Fault Monitoring, Incident Ticketing, Escalation Procedures, Log Analysis

PROFESSIONAL EXPERIENCE

Network Engineer Intern | Networkers Home, Bengaluru, India

Jan 2025 – Present

Routing & Switching:

- Configured and verified OSPF (single-area and multi-area), EIGRP, BGP (iBGP/eBGP), and RIPv2 in multi-protocol lab topologies; applied route redistribution with route maps and administrative distance tuning for optimal path selection.
- Designed and deployed VLAN architectures using IEEE 802.1Q trunking with access/trunk port configuration, VTP (Server/Client/Transparent modes), and inter-VLAN routing via Router-on-a-Stick and Layer 3 SVIs on multilayer switches.
- Implemented STP, RSTP, and PVST+ to eliminate Layer 2 loops; configured BPDU Guard, Root Guard, and PortFast for port security; deployed EtherChannel (LACP/PagP) for link aggregation and redundancy.

Network Security & Services:

- Configured standard and extended ACLs (numbered and named) for traffic filtering and security policy enforcement across routers and Layer 3 switches in simulated enterprise environments.
- Implemented Static NAT, Dynamic NAT, and PAT (NAT Overload) to manage IP address translation between private LAN and simulated WAN environments; configured Site-to-Site VPN tunnels using IPsec fundamentals.

- Set up DHCP server/relay configuration, DNS resolution, NTP synchronization, SNMP community strings, and Syslog for centralized network service management and monitoring.

Troubleshooting & Lab Practice:

- Diagnosed and resolved network faults using Cisco IOS show and debug commands (show ip route, show interfaces, show spanning-tree, debug ip ospf, etc.) with structured OSI-layer-based troubleshooting methodology.
- Designed and simulated real-world WAN/LAN topologies using GNS3, EVE-NG, and Cisco Packet Tracer to validate configurations; used Wireshark for packet capture and protocol analysis.
- Performed IP addressing schemes using VLSM and CIDR subnetting for efficient IP address allocation across simulated enterprise branch and HQ network environments.

CERTIFICATIONS

CCNA 200-301 – Cisco Certified Network Associate

2025

Issued by: Networkers Home, Bengaluru, India | Covers: Networking Fundamentals, IP Connectivity, IP Services, Security Fundamentals, Automation & Programmability

CCNP Enterprise – Cisco Certified Network Professional

2025

Issued by: Networkers Home, Bengaluru, India | Covers: Advanced Routing, Switching, SD-WAN, Network Assurance, Security, and Automation

EDUCATION

Bachelor of Engineering (B.E.)

2025

P.D.A. College of Engineering, Gulbarga, India | CGPA: 7.1 / 10

Pre-University Education (Science – PCM)

2018

Viswa Chethana PU College, Vijayapur, India | Score: 62.5%

SSLC – Secondary School Leaving Certificate

2016

Brilliant High School, Myleshwara, India | Score: 87.36%

LANGUAGES

English (Professional Proficiency) | **Hindi** (Fluent) | **Kannada** (Native)
